

Multi site networks

Private and secure intra-company networking

When your business operates from multiple sites, it's vital that your internal company network is private, secure and resilient to protect your operations. Our data networking services deliver a fast and reliable means of connecting your offices and sites via our secure MPLS enabled IP network, using flexible cloud technology at the fraction of the cost of point-to-point services.

We can integrate servers hosted in our ultra secure data centres with the option of adding your preferred connectivity solution such as fibre Ethernet or traditional broadband into one private network. Our hosting environment is secured by firewall security systems and supported by our experienced team of engineers. We can work alongside your internal or outsourced IT team to ensure your secure data networking requirements are fulfilled to your exact standards.

Features & Benefits

- **Maximum flexibility**
Choose any Internet access technology from ADSL to Ethernet to suit your requirements.
- **Efficient working environment**
Fast and secure MPLS enabled network.
- **MPLS private cloud options**
