

# Client case study

## Themis

<b>Date added:</b>	11 August 2015
<b>Categories:</b>	Virtual Data Centre, Managed Service, Technical Support, Ethernet

### Description:

Themis deliver analytics and pharmaceutical data worldwide and rely on high performance computing power and a strong internal IT infrastructure. Themis' IT team work tirelessly to ensure high quality, reliable data for their customers, and the Cloud Heroes engineers work hand-in-hand with them to achieve this through regular maintenance and ensuring the staging servers and general infrastructure has fast, resilient connectivity to the internet 24/7.

As well as supplying Themis with two high-speed Ethernet lines, we also undertake special projects for Themis, such as improving their system security through the deployment and configuration of firewalls, improving local network performance, and other jobs where specialist technical knowledge is required. Together we make sure the company has the right tools and systems in place to maintain its positive growth and satisfied, international customer base.
